

Make your new home warm, safe and quiet

HiBond – the superior flooring system for your home

The secret to creating your dream home is to find modern materials that are stronger, healthier and that will enhance your long term investment. The answer lies with HiBond – a versatile, lightweight steel flooring system that delivers rapid and cost effective installation for residential concrete floors.

HiBond flooring is a system created by bonding steel with concrete. This combination makes full use of the combined structural properties of both products. The result is a strong and stable residential floor – a floor which provides thermal insulation, soundproofing and fire resistance.

HiBond

Easy Installation.
Simple and quick to install, the HiBond system is made from lightweight pre-formed steel decking which is easily laid and fixed together ready for concreting.

Sloping Sections.
Not only is HiBond flooring great for second storey floors, it is ideal for building on sloping sections, as it can be suspended saving the expense of back filling.

Enduring.
HiBond does not rot or warp and will stand the test of time.

Acoustically Dampened.
HiBond flooring offers acoustic insulation between floors letting you enjoy peace and quiet and also making creaky floors a thing of the past.

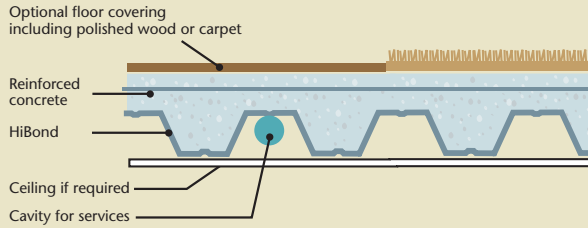

Fire Resistant.
HiBond flooring gives excellent fire protection providing peace of mind for the whole family.

Thermally Insulated.
With HiBond, cold drafts seeping in through the floors are eliminated. HiBond helps to thermally insulate your floor and house against the harsh natural elements.

HiBond

Steel and concrete floors have been incorporated into residential homes around the world for over 50 years. In New Zealand many houses every year are built using HiBond flooring. Make your house one of these too.

Discover the secret to building your dream home with HiBond by calling 0800 Dimond today.

HiBond is manufactured by Dimond – the largest New Zealand owned and operated roofing and flooring company delivering value for over 40 years.

This brochure must be read in conjunction with the Dimond Structural Systems Manual. HiBond needs to be designed by a Structural Engineer.
October 2004.

HiBond unique features

- ✓ Reduces overall flooring costs
- ✓ Excellent for sloping sections with no need to excavate or to use fill material
- ✓ Suspended or direct fixed ceilings can be easily installed to the HiBond underside
- ✓ Facilitates the installation of utilities such as cabling, piping and ducting
- ✓ Uses less concrete than traditional flat slab concrete floors
- ✓ Eliminates creaking normally found in flooring of all-timber construction
- ✓ Provides an ideal surface for laying carpets, parquet flooring, tiles and other floor coverings
